

FULFILLING NATURE'S

RESTORATION RESOURCES:

CALIFORNIA'S HABITAT PLANNING & RESTORATION PROFESSIONALS

Restoration Resources is a perfect example of natural business evolution. Starting out as a successful landscaping company founded in 1979, our focus shifted in 1989 from traditional landscape installation to native habitat design and construction. To better reflect this new business direction, we changed our name in 2002 from Sierra View Landscape to Restoration Resources.

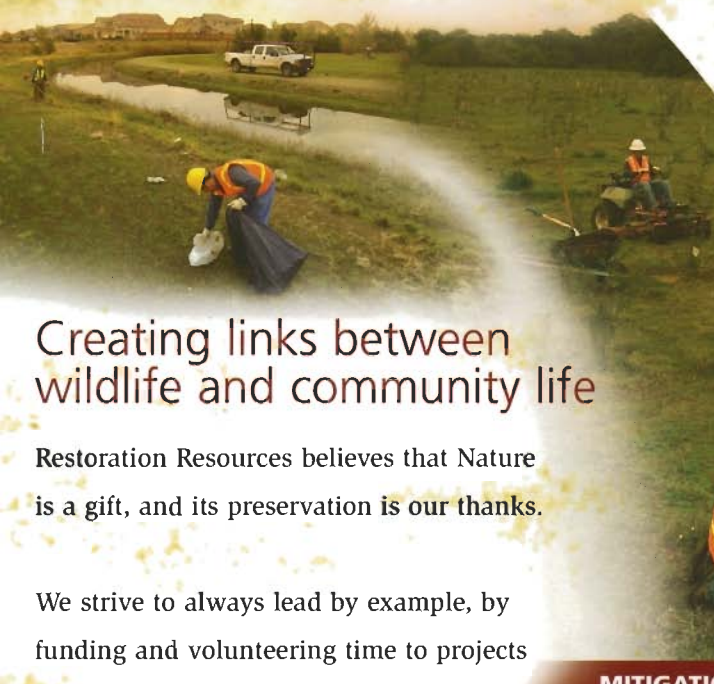

Today, Restoration Resources continues to thrive as a leader in the field of wetland and riparian habitat mitigation and restoration, oak tree mitigation, and stormwater detention.

We continue to innovate solutions that help our clients stay one step ahead on the path to environmental compliance...

...and community enhancement.

VIBRANCY... AND SUSTAINABILITY

Creating links between wildlife and community life

Restoration Resources believes that Nature is a gift, and its preservation is our thanks.

We strive to always lead by example, by funding and volunteering time to projects such as:

- Cleanup of urban creek corridors
- Highway litter removal
- Education programs on native plants, water-wise landscaping, wildfire avoidance
- Nature center programs and facilities construction

We also work with community volunteers to capacity-build around environmental stewardship. When RR works on a habitat project, we involve residents from the adjacent communities. We emphasize the importance of volunteerism and pride of ownership – after all, they will be the ones enjoying the fruits of our labor when our work is done.

MITIGATION ALTERNATIVES

1. Avoidance
2. Enhancement of Existing Habitats
3. Restoration
4. Creation of New Habitats

Helping clients reap rewards from environmental enhancement

Meeting environmental protection requirements can be an arduous – and expensive – undertaking. But increasing habitat values increases property values, as well as the aesthetic appeal of land development projects.

That's what makes Restoration Resources such a valuable resource.

We have more experience in the field than anyone else in Northern California.

Restoration Resources specializes in **restoration ecology**, a field that integrates:

- Environmental sciences
- Ecology
- Economics
- Sociology
- Politics

Clients look to RR for our:

- Vast experience with large-scale and challenging restoration projects
- Thorough understanding of the regulatory process
- Ability to help expedite the permitting processes
- Experience collaborating with federal, state and local regulatory agencies
- Landscape design/construction and habitat management expertise
- Knowledge of native plants and wildlife species
- Dedication to environmental stewardship

RR provides solutions that are ecologically sound, economically smart

As a **design/build firm**, we provide a one-stop resource for projects that involve wildland, wetland, riparian, woodland, grassland/meadow, oak tree, revegetation and/or threatened wildlife species habitats.

STAFF RESOURCES

- Wildlife and fisheries biologists
- Restoration ecologists
- Horticulturists
- Soil specialist
- Irrigation system specialists
- Licensed pesticide applicators
- Farming techniques experts
- Surveyors/Grade setters (GPS, GIS, Total station)
- Landscape architects
- Landscape designers
- General building contractors
- Landscape contractors
- Engineering contractors
- Erosion control specialists
- Native plant nursery staff

Restoration Resources can take your project from beginning (planning and design) through to completion (successful habitat restoration).

We also can work in partnership with other project contributors to provide:

- Opportunities & Constraints Analysis
- Plan Preparation
- Design
- Cost estimating
- Construction
- Habitat Management
- Monitoring
- Reporting
- Consulting

RESTORATION
RESOURCES

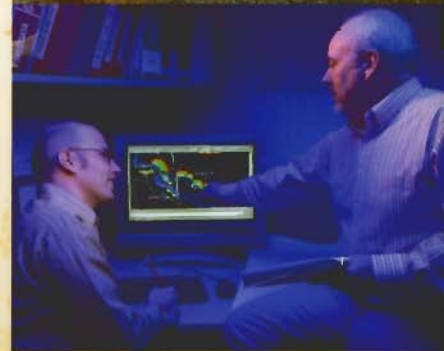

VITAL ROLE IN COMMUNITIES

We see a vibrant future in each client's project. At Restoration Resources, we take a holistic approach to our work. We employ the latest scientific methods and construction technology in all phases of habitat restoration/mitigation.

We custom grow our own native plants and revegetative materials at our on-site nursery.

With sensitivity to the singular nature of each site, we take great pride in developing pleasing and functional natural landscapes and in promoting responsible stewardship of those landscapes.

Our Commitment

Restoration Resources is committed to a land ethic that honors the earth, the forces of nature, and life in all forms.

We are a company that nurtures the growth of our employees and business relationships, while restoring the natural habitats of the landscapes in which we live.

Individually, and as a company, we value integrity, fairness and loyalty. We strive to do what's right for our clients and what's right for the environment.

But what truly sets Restoration Resources apart is our ability to apply

these principles and techniques to the end product, to achieve sustainability.

"No matter where in the project we get involved, I'm always looking 25 years out, at what the landscape will look like, how it will function, and how it will relate to other natural corridors in perpetuity."

—Riley Swift
FOUNDER AND OWNER
